Depth Benchmark

prototype internal depth target. Benchmark uses aggregate counts only. Chain-v2 component names, prose, design content, prices and part numbers are not imported into the scratch generator.

5 meeting benchmark, 2 below benchmark, average comparable ratio 0.93.

Dimension	Scratch	Benchmark	Ratio	Status	Notes	Action
Functional modules	10 modules	10 modules	1	meets	Core architecture breadth.	Add missing functional modules only when the product class genuinely requires them.
Submodules	30 submodules	30 submodules	1	meets	Submodule count is a rough proxy for engineering decomposition depth.	Expand thin modules with concrete sub-functions and carrier interfaces.
Component candidates	120 components	120 components	1	meets	Component-word count is a rough proxy for BoM review surface, not sourcing quality.	Add justified component candidates where submodules still hide assemblies.
Interface link volume	39 links	38 links	1.03	meets	Compares link volume only; chain-v2 grammar links and scratch interface edges are not semantically identical.	Add interface contracts only where they clarify a real energy, material, signal, load or service path.
Admitted priced-line ratio	0 ratio	0.75 ratio	0	below	Prototype target expects most critical lines to become source-backed before publication.	Use sourcing intake to admit source-backed price/manufacturer/MPN evidence; do not copy benchmark estimates.
Sections scoring >=8	5 sections	6 sections	0.83	below	Readiness gate requires every scored section to reach the target.	Clear section-specific readiness actions, especially BoM evidence.
Verification activities	43 activities	26 activities	1.65	meets	Scratch-only evidence workflow depth; not compared to chain-v2 content.	Keep adding verification activities when new requirements, interfaces or standards are introduced.

Stage	Status	Summary	Metrics	Evidence	Limitations
Brief Parsing	passed	Extracted quantified requirements from the user brief before design generation.	requirement_count: 3; numeric_fact_count : 3; requirement_trace_covered: 3; requirement_trace_partial: 0; requirement_trace_uncovered: 0	wear_days: 14 days; reading_interval_minutes: 5 minutes; mard_percent: 9 %; wear_days: covered; reading_interval_minutes: covered; mard_percent: covered	Parsing is deterministic and currently recognises only a small set of hardware requirement patterns.
Product-Class Selection	passed	Selected cgm with high confidence from brief keywords.	selected_class: cgm; confidence: high; keyword_scores: cgm:9	cgm: 9	Classifier is keyword based; ambiguous multi-domain briefs need an LLM or richer taxonomy pass.
Universal Module Architecture	passed	Built a 10-module cgm architecture from the scratch universal architecture grammar.	module_count: 10; architecture_source : scratch_universal_architecture	Skin Patient Interface; Glucose Sensing Instrumentation; Applicator Insertion Mechanism; Transmitter Housing Structure; Wearable Energy Source; Low-Power Distribution; plus 4 more	The scratch grammar is hand-authored and deterministic; it still needs independent engineering review.
Submodule Expansion	passed	Expanded each module into engineering submodules with local purpose, interfaces and component candidates.	submodule_count: 30; average_submodules_per_module: 3	skin_patient_interface.adhesive_patch_stack; skin_patient_interface.cannula_skin_contact; skin_patient_interface.wear_comfort_retention; sensing_instrumentation.glucose_filament_stack; sensing_instrumentation.analog_frontend; sensing_instrumentation.calibration_drift_monitoring; plus 24 more	Submodule completeness is judged by deterministic coverage checks, not by a physics simulator.
Interface Graph	passed	Checked class-required module-to-module interfaces before allowing BoM review.	required_links: 10; present_links: 10; missing_links: 0; graph_nodes: 40; graph_edges: 69; shared_interface_edges: 29; missing_required_graph_edges: 0	skin_patient_interface -> sensing_instrumentation via interstitial_fluid_path: present; actuation_kinematics -> skin_patient_interface via insertion_path:	Interfaces prove allocation coverage only; they do not yet validate ratings, thermal margins or dynamic behaviour.

Architecture Readiness Gate	passed	Architecture validators found no blocker or major issue, so candidate BoM review can start.	ready_for_bom: true; blocking_issue_count: 0; sanity_pass: 5; sanity_warn: 0; sanity_fail: 0	pass Wear Duration: 14 days; pass Reading Interval: 5 minutes; pass MARD Accuracy Target: 9 %; pass Biofluid/Signal Closure: present; pass Patch/Power/Comms/Safety Closure: present	Passing this gate means deterministic architecture checks passed; it is not a certified engineering sign-off.

Engineering Sanity Checks

Check	Status	Value	Expected	Interpretation
Wear Duration	pass	14 days	7 to 15 days for common disposable CGM patch wear; longer wear needs adhesive, biocompatibility and sensor-drift evidence	14 days is plausible only after adhesive retention, irritation, sterile boundary and sensor-drift evidence are reviewed.
Reading Interval	pass	5 minutes	1 to 15 minute reading intervals for wearable trend monitoring before battery and radio duty-cycle evidence	5 minute readings are credible after sensor settling, BLE duty cycle, buffering and battery budget are validated.
MARD Accuracy Target	pass	9 %	<=10% MARD target before clinical validation; 10-15% needs strong use-case constraints, >15% is weak for dosing-adjacent use	9% MARD is a target only; it still needs clinical protocol, comparator method, calibration and population evidence.
Biofluid/Signal Closure	pass	present	interstitial fluid path, electrode signal, sensor signal bus and calibration data bus present	Patient-contact fluid access, electrochemical readout and calibration state are connected before BoM sourcing.
Patch/Power/Comms/Safety Closure	pass	present	adhesive skin boundary, sterile boundary, BLE link, low-power rail, alarm bus and disposable applicator present	Wear attachment, sterility, telemetry, energy and patient safety paths are named before sourcing or clinical claims.

Engineering Calculation Ledger

3 calculations: 2 within deterministic envelope, 1 needing engineering review, 0 outside envelope, 0 blocked by missing inputs. These are arithmetic gates, not proof of real-world performance.

Calculation	Status	Formula	Result	Envelope	Interpretation	Evidence Required
CGM readings per day	within envelope	1,440 / reading_interval _minutes	288 readings/day	96 to 1,440 readings/day covers 15 min to 1 min intervals before power and buffering proof.	288 readings/day implied by sample interval.	Confirm sensor settling, BLE duty cycle, local buffering, timestamping and battery budget.
CGM total wear readings	needs review	wear_days * (1,440 / reading_interval _minutes)	4032 readings/wear	Arithmetic only; storage, power and calibration drift need evidence.	4032 readings over the stated wear period.	Confirm memory, telemetry retries, battery capacity, sensor drift and calibration strategy.
CGM MARD margin to 10%	within envelope	10 - mard_percent	1 percentage points	Positive margin to 10% target before clinical validation.	1 percentage-point margin to a 10% MARD target.	Confirm clinical protocol, comparator, calibration method, population mix and error-grid analysis.

Section Score Ledger

Rule: start at 9, subtract 3 per blocker, 1.5 per major, 0.5 per minor, floor at 1. Mean score 7.67. This is a deterministic gate score from current validators, not an external reviewer score or proof of real-world engineering quality. Reviewer acceptance is tracked separately in the verification ledger.
